Overview

This slim LED light bar is great for off-road driving lights, daytime running lights, or fog lights on your truck, ATV, or UTV and can also be used for industrial lighting, marine lighting, and tractor lighting. At just 1" thick, the low-profile LED light bar features a single row of LEDs that emit 5,000 raw lumens of cool white illumination. This 20" LED light bar is available with a 60° flood beam or a narrow 30° spot beam pattern. The durable LED work light is waterproof and shock resistant. A polycarbonate lens and powder coated black aluminum housing protect internal components, and an integral heat sink allows LEDs to run cool, which leads to an incredibly long life span. Mounting feet and installation hardware are included along with a 6" wire lead with a DT connector and a mating 6.5" DT pigtail adapter. The LED light bar is capable of being driven at 54 watts but typically

consumes just 35 watts of power. Operates within a wide 10-30 VDC range.
